

Spice Processing

STERIS Isomedix Services provides contract services for microbial reduction and contamination control through a North American network of 18 processing facilities. Our services include gamma irradiation to effectively reduce levels of foodborne pathogens in herbs, spices, and vegetable seasonings.

Committed to Customer Satisfaction

Gamma irradiation provides a safe, reliable method for processing dry food ingredients that may have been contaminated during the harvest, processing, or storage stages. The gamma irradiation process:

- Reduces levels of foodborne pathogens
- Is lethal to *E. coli*, *Salmonella*, and other disease-causing microorganisms
- Helps preserve quality
- Extends product shelf life
- Is chemical-free and residual-free
- Can be applied to products packed in bags, drums, or boxes
